# Input Output (I/O) System

Connect your simulated cockpit hardware to your flight simulation program!

- **Compatible with most popular flight simulator programs[1]. (X-Plane, DCS World[2], Prepar3D)**

- **Point and click configuration. (No coding or scripting!)**

- **Scalable. (Start small and add modules as you need them.)**
  - **Multiple modules and types can be connected.**
  - **Sixty-four I/O points per I/O module.**
  - **Up to twelve gauges per Mini Stepper module[3].**

- **All your cockpit hardware configuration in one place.**

- **Support for 3rd party interface boards[4].**

1 The ACES Cockpit Software Suite uses software plug-ins to interface with different flight simulator programs. ACES software plug-ins are sold separately.
2 Not all DCS World airplane modules are supported. Visit www.aces-sim.com for a list of supported airplane modules.
3 The Mini Stepper Module can drive twelve mini steppers. Visit www.aces-sim.com for the complete specification.
4 Visit www.aces-sim.com for a list of supported 3rd party interface boards.

Visit www.aces-sim.com for more information.
